Nov 2021

Ladoke Akintola University of Technology

Ogbomosho, Nigeria

PROJECTS

TradExpress, *A frontend project*

- This is a frontend project built using Html, CSS, Reactjs, and Bootstrap.
- It's a trading platform landing page called TradExpress, where a user can sign up, buy and sell cryptocurrency.
- Also, an API was fetched in order for a user to see the real-time current market price of all the top cryptocurrencies.

Post List, *A full stack web project*

- A project built using Html, CSS, Bootstrap, and Reactjs in our front end, while we used Python and Django at our backend.
- This project was our final project during my course of study, which consist of RESTful API. In this project, a user can post his/her blog.
- This project was carried out by a group of 3 people including me.

Spatial variability of two major FM Radio Stations, *within Ogbomosho*

- In this study, an effective field strength measurement of the channel across Ogbomoso, Oyo state, was conducted as far as road accessibility permits.
- Other necessary radio communication parameters on the MHz band such as line of sight, elevation and geographical coordinates of the various data points were also determined.
- This project was my final year project at the university, and it was carried out by a group of 7 students including me.
